

EX NO: 3	EXAM REGISTRATION SYSTEM
DATE:	

AIM :

To draw the UML diagrams such as **Use Case, Class, Activity, Sequence, Collaboration, State Chart, Component, Deployment and Package diagrams** for the Exam Registration System.

SOFTWARE REQUIREMENTS SPECIFICATION

1.0 Hardware Requirements

- Intel Pentium Processor i3/i5
- 4 GB RAM
- 500 GB Hard Disk

1.1 Software Requirements

- Umbrello UML Modeller
- Windows/Linux Operating System

Your original record mentions Rational Rose / Argo UML, but since you are actually creating the diagrams in **Umbrello**, you can write Umbrello here. The source itself lists Rational Rose / Argo UML.

1.2 PROBLEM ANALYSIS AND PROJECT PLANNING

The Exam Registration System allows students to register for examinations. The registered student details are stored and maintained in a database. The details are verified to identify fraudulent or duplicate registrations. After verification, the database is used to issue hall tickets and other required materials to eligible students.

1.3 PROJECT DESCRIPTION

This software is designed to verify candidate details through a central computer. The candidate details are provided through the administrator and verified by the system. After successful verification and approval, the hall ticket is issued to the candidate.

1.4 REFERENCE

IEEE Software Requirement Specification Format.

USE CASE DIAGRAM

Actors:

- Student
- Educational Officer

Use Cases:

- Student Details
- Student Photo
- Submission of Proof
- Verification of Proof
- Payment of Fees
- Issue of Hall Ticket

These are the actors and use cases given in your record.

CLASS DIAGRAM

Class	Attributes	Operations
Central Educational System	Student Details	Print Hall Ticket(), Issue Hall Ticket()
Central Educational System	Student Details	Print Hall Ticket(), Issue Hall Ticket()
Educational Officer	Student Details	Enter Details(), Issue Hall Ticket(), Verify Proof()

The classes, attributes and operations follow the Experiment 3 section of your record.

ACTIVITY DIAGRAM

Activities:

1. Enter Student Details
2. Submit Student Proof and Photo
3. Payment of Fees
4. Issue Hall Ticket

Decision:

Verification of Proof

SEQUENCE DIAGRAM

Objects:

- Student
- Educational Officer
- Central Education System

The sequence diagram shows the interaction between these objects through messages and return messages.

Simple Sequence:

Step Description

- 1 Student submits details
- 2 Officer verifies proof
- 3 Student pays fees
- 4 System verifies details
- 5 Hall ticket is issued

COLLABORATION DIAGRAM

The Collaboration Diagram shows the communication between the **Student, Educational Officer and Central Education System** during exam registration.

STATE CHART DIAGRAM

The State Chart Diagram represents the different states involved in the exam registration and hall ticket process. It shows how the system moves from one state to another.

States:

Start → Enter Details → Submit Proof → Verify Proof → Pay Fees → Approved → Hall Ticket Issued → End

COMPONENT DIAGRAM

The Component Diagram shows the structural relationships between the components of the Exam Registration System.

Components:

- Exam Registration System
- Registration
- Verification
- Search

These component names are given in your record.

DEPLOYMENT DIAGRAM

The Deployment Diagram represents the physical deployment of the system and its artifacts on different nodes.

RESULT

Thus, the UML diagrams for the Exam Registration System were successfully designed, executed and verified.
